Complementary Events and the Complement Rule

1. Here are the tabulated major and gender frequencies from the class survey.

<table>
<thead>
<tr>
<th>Major</th>
<th>Gender</th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Female</td>
<td>12</td>
<td>20</td>
<td>32</td>
</tr>
<tr>
<td>Finance</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Other</td>
<td>4</td>
<td>3</td>
<td>7</td>
<td></td>
</tr>
<tr>
<td>Undecided</td>
<td>10</td>
<td>15</td>
<td>25</td>
<td></td>
</tr>
<tr>
<td>Total</td>
<td>26</td>
<td>38</td>
<td></td>
<td>64</td>
</tr>
</tbody>
</table>

Use the data to answer the following questions:

(a) If you pick a random survey respondent, what is the probability that the major will not be Finance?

(b) What proportion of survey respondents have decided on a major?

2. Suppose you flip five coins. What is the probability of getting at least one head?

*Hint: what is the complement of this event?*
The Multiplication Rule

3. A man has 4 pair of pants, 6 shirts, 8 pairs of socks, and 3 pairs of shoes. Ignoring the fact that some of the combinations may look ridiculous, how many ways can he get dressed?

4. A restaurant offers soup or salad to start, and has 11 entrees to choose from, each of which is served with rice, baked potato, or zucchini. How many meals can you have if you can choose to eat one of their 4 desserts or have no desert?

5. How many answer sheets are possible for a true/false test with 15 questions?

Permutations

6. How many ways can 5 people stand in line?

7. How many different batting orders are possible for 9 baseball players?

8. How many ways can 8 books be put on a shelf?
More Permutations

9. Twelve people belong to a club. How many ways can they pick a president, vice-president, secretary, and treasurer?

10. In a horse race the first three finishers are said to win, place, and show. How many finishes are possible for a race with 11 horses?

11. Five different awards are to be given to a class of 30 students. How many ways can this be done if (a) each student can receive any number of awards, (b) each student can receive at most one award?

Combinations

12. A club has 23 members.
   (a) How many ways can they pick 2 people to be on a committee to plan a party?

   (b) How many ways can they pick 4 people to be on a committee to plan a party?

13. A restaurant offers 15 possible toppings for its pizza. How many different pizzas with 3 toppings can be ordered?
Advanced Problems

14. **New York state lotto.** You pick six of the numbers 1 through 54, and then in a televised drawing six of the numbers are selected. If all six of your numbers are selected then you win a share of the first place prize. If five or four of your numbers are selected you win a share of the second or third prize.
   (a) How many ways are there to select 6 numbers for the lotto ticket?

   (b) How many ways are there to select a first prize number?

   (c) What is the probability of selecting a first prize number?

15. **Quality assurance.** Suppose we have a batch of 100 light bulbs, which contains 5 defective bulbs. If we pick 10 for testing, what is the probability that no bulbs in the sample are defective? We can answer this question in three steps.
   (a) How many ways are there of picking 10 bulbs for testing out of 100?

   (b) How many ways are there of picking 10 non-defective bulbs?

   (c) What is the probability that there are no defective bulbs in your sample of 10?
